[History of Haiti in 19th-18th Centuries - The Haitian White population]

175 223 265 369 [463] planters and expressing their contempt for the townspeople, speaks of the towns as existing primarily to serve the needs of these country squires as centers for the storage and disposal of their produce: "There are found merchants, artisans, judges, recorders, solicitors, notaries, bailiffs, doctors. But one finds neither nobles, men of property, nor persons of wit and perception." [16]

175 The physical aspect of the cities had little to recommend them, especially since the utter lack of sanitation made for extreme uncleanliness in all Haitian centers. This fact is of special interest in the light of the frequent references to this trait of Haitian cities in the writings of those Europeans who described the life of independent Haiti. Invariably in such accounts the littered state of the streets, even in the capital, is stressed, and tendered as evidence of the absence of civilization in this Negro Republic.[17] Even though occasional mention is made that this state of affairs existed before the Revolution, nowhere, whether in St. John or in the later writers who date from the time of the occupation of the country by the United States Marine Corps, is there any realization that this condition antedates the independence of Haiti. The cleanliness of Africans in Africa wherever the natives have ready access to water has been well attested, and is still true in those regions from which the ancestors of the people of Haiti principally derived.

175 291 368 523 Yet some aspects of life in the towns livened the picture of Haitian colonial existence. Outstanding were the opportunities offered by these centers for social intercourse, and even for intellectual and artistic stimulation of a kind, such as was afforded by the famous *Cercle des Philadelphes* of Cap Française, dedicated to literary, philosophical, and, above all, to political discussions.[18] Masonic lodges, later taken over by the Negroes and today of appreciable importance in Haiti, were also instituted by the French, the first having been founded at the Cap in 1740.[19] Purely social meeting-places, such as public

Spring water in the country districts is frequently

polluted by all sorts of excreta; the watering of milk is a common practice, and samples of milk have been generally found to contain many times the normal amount of bacilli. The cases of tuberculosis are practically always complicated by malaria.

Dysentery, when caused by bacilli, is epidemic in nature. In Haiti this form, known as "colerin," annually affects about a quarter of the rural population. Another type, caused by a variety of amoeba, affects another ten or twenty per cent, according to the region. Enteritis is less serious than dysentery but just as prevalent, being caused by protozoa and intestinal worms. Poor diet, the abuse of alcohol, premature weaning, and unwise nursing are also responsible. Granular conjunctivitis affected sixteen per cent of the children examined by the Rockefeller Foundation.

Cancer seems to strike only a normal number of Haitians; goitre is common in the mountain districts; leprosy has become a menace in the West and South; elephantiasis is present, particularly in the South; gusarola (characterized by patches of skin assuming different color) is fairly common in the Cul-de-Sac plain; chicken pox, influenza, and meningitis epidemics are occasionally serious.

The health of the peasant women is seriously and continuously endangered by their mode of life and work. It is customary for females, from girlhood onward, to carry heavy burdens on their heads—over steep paths in the mountains, along rocky trails, up hill and down. The commonest sight in Haiti is to see a woman swinging along with a great load of fuel, a tin of water, a bundle of building material, a basket of fruit, on her head. Cranial bones are flattened, the spine is bent, internal organs are strained or damaged. For ill-nourished persons to carry heavy weights for long distances with little rest means undue pressure on the heart and lungs, and so an increasing tendency to cardiac and pulmonary infections as well as chronic anemia. Overwork frequently results in miscarriages.

As has been said, childbirth often occurs by the roadside, on the way to market, or in the market place. In no case can a peasant woman remain in bed for a proper period either before or after parturition. Midwives are untrained; they use primitive methods which inevitably result in defective development of infants, lessened resistance to disease, high infant mortality, and a prevalence of abdominal diseases in women. Pressure of work, whether in the field or on the way to market, makes a mother soon stop nursing her
